CR HHD gene deletion in Rh negative haplotypes. The Rhesus genes

CR iocus comprises the RHD, SMP1 and RHCE (ail undefined) genes and/or the

CR clocus comprises the RHD, SMP1 and RHCE (ail undefined) genes and/or the

CR Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box

CR Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box

CR Rhesus box(es), preferably the hybrid RHCE genes are located at

CR chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the

CR HHD deletion in the common RHD negative haplotypes. The sequence has

CR been used to design primers which are useful for: (1) the specific

CR detection of the common RHD positive haplotypes in D-negative

CR cl individuals; (2) blood group typing; (3) determining whether a patient

CR can be transfused with RhD negative blood and whether blood is suitable

CR for transfusion to patients who should not be exposed to antigen C; (4)

CR assessing the risk of a RhD negative mother of conceiving or carrying an

CR RHD positive foetus. Anti-D antibodies are useful for treating pregnant

CR women who are Rhesus D negative, where the foetus is not homozygous for

CR the RHD gene to treat or prevent haemolytic disease of the newborn.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   627
```

The sequence represents the coding sequence of Rhesus gene upstream Rhesus box of D positives. The Rhesus genes locus  $\frac{1}{2} \frac{1}{2} \frac{1}{2$ 

10cus:

```
comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box and/or the downstream Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the RHD deletion in the common RHD negative haplotypes. The sequence has been used to design primers which are useful for: (1) the specific detection of the common RHD positive haplotypes in D-negative haplotypes. Individuals; (2) blood group typing; (3) determining whether a patient can be transfused with RHD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigen C; (4) assessing the risk of a RhD negative mother of conceiving or carrying an RhD positive foetus. Anti-D antibodies are useful for treating pregnant women who are Rhesus D negative, where the foetus is not homozygous for the RHD gene to treat or prevent haemolytic disease of the newborn.

RHD nucleic acid molecular positive haplotypes in RHCE genes structure, D-negative useful for detection individuals, comprise comprises RHD, of common SMP1

Disclosure; Fig 10; 135pp; English

The sequence represents the coding sequence of Rhesus gene locus:

downstream Rhesus box of D positives. The Rhesus genes locus
comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the
comprises the RHD, SMP1 and RHCE genes and/or the
Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box
and/or the downstream Rhesus box. The RHD and RHCE genes are located at
chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the
RHD deletion in the common RHD negative haplotypes. The sequence has
been used to design primers which are useful for: (1) the specific
detection of the common RHD positive haplotypes in D-negative
individuals; (2) blood group typing; (3) determining whether a patient
can be transfused with RhD negative blood and whether blood is suitable
for transfusion to patients who should not be exposed to antigen C; (4)
assessing the risk of a RhD negative mother of conceiving or carrying an
RHD positive foetus. Anti-D antibodies are useful for treating pregnant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20
                                                                                                    The sequence represents the coding sequence of Rhesus gene locus:

Chybrid Rhesus box of RHD negatives. The Rhesus genes locus

comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

Comprises the RHD, SMP1 and RHCE (all undefined) genes are located at the common stream Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the RHD deletion in the common RHD negative haplotypes. The sequence has been used to design primers which are useful for: (1) the specific detection of the common RHD positive haplotypes in D-negative individuals; (2) blood group typing; (3) determining whether a patient can be transfused with RhD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigen C; (4) assessing the risk of a RhD negative mother of conceiving or carrying an RhD positive foetus. Anti-D antibodies are useful for treating pregnant when who are Rhesus D negative, where the foetus is not homozygous for the negative blood and whether blood spreaments as the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the foetus is not homozygous for the negative where the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5002

therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 24 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immune system disorder; AIDS; autoimmune disease; rheumatoid ari inflammation; allergy; neurological disorder; Alzheimer's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; anglogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification; ss.
gastrointestinal disorders, pregnancy related disorders, disorders, and infections. The proteins can also be used healing and epithelial cell proliferation, to prevent sk

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding cDNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated is used

                                                                                                                                                                                                  ragments of a SPINKS clone, sequencing primers and PCR primers for SPINKS. SPINKS encodes lympho-epithelial Kazal-type related inhibitor (LEKT1), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINKS gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINKS gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Determining susceptibility to atopic disease or carrier status of Netherton's syndrome in humans by identifying variants of or mutations in SPINK5, a gene encoding lympho-epithelial Kazal-type related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   02-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B
                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAS44359-AAS44514 represent the SPINK5 gene, contigs and cragments of a SPINK5 clone, sequencing primers and PCR primers for SPINK5. SPINK5 encodes lympho-epithelial Kazal-type related inhibitor (LEKTI), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINK5 gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINK5 gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                          CC The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an olligo-dT primer and an oligonucleotide comprises one of CC the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end cC complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC complementary strand of a polynucleotide which comprises a 1'-end sequence, where the CC complementary strand of sequence is selected from those defined in CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC comprises at least 15 nucleotides and the combination of CC the specification. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC consequence of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CC cDNAs easily without any specification both sequences; and AAH13628 and CC AAH36133 to AAH18742 represent human cDNA sequences; and AAH13629 to AAH13632 cof the present human amino acid sequences; and AAH13629 to AAH13632 cof the present invention.
                                                                                                                                                                                                                                                                         Query Ma

                                                                                                                                                                                                                                                                                                                                                                                    Ър
                                                                                                                                                                                                                                                                                                                                                                                                                     δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated peptide (I) consisting of an CC amino acid sequence selected from: (a) the amino acid sequence of a CC variant of the oestrogen receptor alpha (ESR-alpha) protein in AAG68251; CC or (b) a fragment comprising at least 10 contiguous amino acids of the protein in AAG68251. (I) has cytostatic, osteopathic, cardiant and CC vasotropic activities, and can be used in gene therapy and vaccine production. (I) is useful for identifying an agent that binds to (I), by CC contacting (I) with an agent and assaying the contacted mixture to CC determine whether a complex is formed with the agent bound to the peptide. A polynucleotide (II), encoding (I), is useful in the CC development of diagnostics and therapies for diseases and disorders mediated/modulated by an oestrogen receptor (ER). (II) is also useful in CC gene therapy for treating cancer, osteoporosis and cardiovascular CC gene therapy for treating cancer, osteoporosis and cardiovascular CC genesent sequence represents the human ESR-alpha gene, which is given in CC the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                      Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC polymerase chain reaction (PCR) primers, oligomers, and for processome cand gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags cf for identifying expressed genes. (I) is useful in gene therapy techniques cc for restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or cc quantitating a polypeptide in tissue, as molecular weight markers and as cc a food supplement. (II) and its binding partners are useful in medical climaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and clid sequences. AAS64197-AAS94564 represent novel human cc diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cc at fip.wipo.int/pub/published_pct_sequences.

(I) is useful as hybridisation probes.

The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due sunburn, to maintain organs before transplantation, for supporting ce culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotraxis, and can be us as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, a in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          proliferative disorders, cancer, tumours, feetal and developmental abnormalities, haematopoietic disorders, diseases of the immune syst.                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polymerose are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or cyantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical classified in the sequences in the sequences have applications in the polypeptide and polynucleotide sequences have applications in consistics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and call and activity and sequences. AAS64197-AAS94564 represent novel human collagration, but was obtained in electronic format directly from WIPO case for the print of the printed in electronic format directly from WIPO case for the print of the printed in electronic format directly from WIPO case for the print of the printed in electronic format directly from WIPO case for the print of the printed in electronic format directly from WIPO case for the print of the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in electronic format directly from WIPO case for the printed in the prin
